

ABSTRACT OF THE DISCLOSURE

A fastening strip for fastening a filter cloth against the filter surface of a solid-liquid separator. The solid-liquid separator comprises at least one filter element provided with a fastening groove
5 for the fastening strip. The filter cloth is fastened to the filter element by means of the fastening strip, whose fastening portion is inserted into the fastening groove. The fastening strip is an elongated piece having a substantially T-shaped cross section and comprising a fastening portion and a support portion transverse to the fastening portion. The support portion provides a protective edging that extends to a distance from the edges of the fastening groove.
